### **DETAILED ACTION**

1. Claims 1-12 are pending for examination as interpreted by the examiner. The IDS filed 7/23/03 was considered for this application.

#### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 4 recites the limitation "predetermined value" in line 2. There is insufficient antecedent basis for this limitation in the claim. For the purposes of examination, examiner assumes "value" should read "level" as given in claim 1.

#### ***Claim Rejections - 35 USC § 101***

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claim 11 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claim 11 is drawn to a "program" per se as recited in the preamble and as such is non-statutory subject matter. See MPEP § 2106.IV.B.1.a. Data structures not claimed as embodied in computer readable media are descriptive material per se and are not statutory because they are not capable of causing functional change in the

computer. See, e.g., Warmerdam, 33 F.3d at 1361, 31 USPQ2d at 1760 (claim to a data structure per se held nonstatutory). Such claimed data structures do not define any structural and functional interrelationships between the data structure and other claimed aspects of the invention, which permit the data structure's functionality to be realized. In contrast, a claimed computer readable medium encoded with a data structure defines structural and functional interrelationships between the data structure and the computer software and hardware components which permit the data structure's functionality to be realized, and is thus statutory. Similarly, computer programs claimed as computer listings per se, i.e., the descriptions or expressions of the programs are not physical "things." They are neither computer components nor statutory processes, as they are not "acts" being performed. Such claimed computer programs do not define any structural and functional interrelationships between the computer program and other claimed elements of a computer, which permit the computer program's functionality to be realized.

***Allowable Subject Matter***

4. Claim 1, 2, 10, and 12 are allowed over the prior art of record because all of the cited references of the record, viewed as closest prior art and considered individually or in combination fail to suggest or fairly teach an optical disk drive including a combination of all of the limitations and their relative functional operations as particularly recited in each of claims 1, 10, and 12. Claims 2-9 are allowed with their respective parent claims. However, claim 4 should be rewritten to overcome the 112 rejection above.

Also, claim 11, if rewritten to overcome the 101 rejection above, would be allowable for the same reason as applied to claim 1.

### **Cited References**

5. The prior art of record not relied upon is considered pertinent to applicant's disclosure. The cited references relate to the signal processing having a holding circuit for holding the read signal based on a first and second control signal.
